Recommendation Letter for Ângelo Azevedo

To whom it may concern,

Ângelo Azevedo, as part of Er3bUs Red-Team, which focuses on Web Application Security Assessment. was involved in the security audit of GameCourse, a platform designed to support the gamification of education. In that context, the team conducted a vulnerability assessment and produced a detailed report of their findings.

They demonstrated professionalism and a high degree of autonomy and proactivity. Not limiting themselves to the obvious problems and tasks, they consistently sought to explore the system more deeply, identifying potential issues that required careful inspection. They demonstrated initiative in selecting appropriate tools and methodologies, and showed sound judgment in prioritizing the most relevant vulnerabilities.

Equally noteworthy is the quality of the work. The report is thorough, well-structured, and clear in its presentation. It not only identifies vulnerabilities but also contextualizes their impact and, when appropriate, suggests mitigation strategies. This level of rigor and clarity made this contribution immediately useful to the development team.

These are essential qualities in security work, and they have shown to possess them to a high degree. For these reasons, I am confident that Ângelo will continue to perform at a high level in any setting that values careful analysis, autonomy, and technical rigor.

Lisbon, April 15th 2026,
